PROFESSIONAL SUMMARY

B.Tech Computer Science Engineering graduate with 7+ months of hands-on internship experience in Python Backend Development, RESTful APIs, FastAPI, Flask, database-driven applications, API integration, testing, and debugging. Experience in developing backend services and automated workflows using SQL/NoSQL databases, Git, and Docker, with additional experience in NLP, Generative AI, LLM concepts, and Prompt Engineering for AI-powered applications.

TECHNICAL SKILLS

Languages	: Python, Java, JavaScript, C++, SQL, HTML5
AI ML	: Artificial Intelligence, Machine Learning, NLP, Generative AI, Prompt Engineering, LLMs
DSA	: Data Structures Algorithms, Problem Solving, Algorithm Design
Backend	: FastAPI, Flask, Django, RESTful APIs, Web Services
API & Integration	: REST API Design, API Specifications, OpenAPI, API Integration, JWT, HTTP
Databases	: MySQL, MongoDB, CRUD Operations
DevOps & Tools	: Manual Testing, Data Validation, Debugging, Git, GitHub, Docker, CI/CD

EDUCATION

NITRA Technical Campus, AKTU
B.Tech, Computer Science & Engineering **CGPA: 7.12/10**

Ghaziabad UP, India
May 2022 – June 2026

EXPERIENCE

Python Developer Intern Druidot Consulting (OPC) Pvt. Ltd.	Feb 2026 – Present Remote
- Developed Python-based AI and backend applications using Flask and FastAPI, integrating RESTful APIs and data-processing workflows.. - Worked on NLP-based text processing and analysis for AI-oriented application workflows. - Integrated Generative AI and LLM-based capabilities through AI API integrations and prompt-driven workflows. - Built and optimized REST APIs, backend services, automation, testing, and debugging using . - Performed data validation and processing with MySQL and MongoDB, supporting reliable AI and backend workflows.	

PROJECTS

NLPCRM – AI-Powered CRM Platform	Python, FastAPI, Flask, MySQL, SQLite, REST APIs	GitHub
- Designed and developed 25+ RESTful API endpoints across contacts, NLP, email, and webhook modules, implementing API specifications, CRUD operations, input validation, and modular backend workflows. - Integrated MySQL and SQLite for structured data persistence and database-driven workflows, supporting reliable customer and application data management. - Implemented JWT-based access control, rate limiting, and input validation.		
ContentDesk – AI Content & Data Processing Platform	Python, Flask, SQLite, REST APIs, GitHub Actions	GitHub
- Engineered a shared Python/Flask backend serving web and desktop application channels, centralizing business logic and database-access workflows for consistent application behavior. - Developed an SEO-scoring crawler and TF-IDF near-duplicate detection workflow to automate content analysis and generate data-driven recommendations. - Implemented 26 automated unit tests in GitHub Actions CI, enabling automated testing on pull requests.		

CERTIFICATIONS & ACTIVITIES

- Python Programming Certification** – Infosys Springboard **Quantitative Research Job Simulation** – JPMorgan
- Presented “Adaptive Residual-Energy Threshold LEACH for Performance & Energy Efficiency” at NGAISL-2026, HRIT University (Apr 2026).
